For Immediate Release

## **Extending Windows Event Viewer**

SnmpSoft Company announces the release of EventLog Inspector, a cost-effective tool for system administrators to extend Windows event log management. The new product provides administrators the ability to translate event log events to a syslog server or forward the events to a specified email address. EventLog Inspector can either run fully silent or interact with the user by displaying pop-up notifications about selected events.

Designed with zero-administration in mind, EventLog Inspector is able to share common configuration settings between all copies of the product running on a local network. Volume pricing of just \$4.99 per license makes EventLog Inspector a bargain and a true value for money.

## **About EventLog Inspector**

EventLog Inspector makes system administrators' everyday job easier by taking care of critical events registered by the Windows event log. While providing a perfectly machined interface for registering and archiving system events, Windows gives little built-in support for manipulating the events being registered.

~ MORE ~

EventLog Inspector extends the capabilities of the Windows event log journal by giving system administrators the ability to do more with the events being registered. With EventLog Inspector, it becomes possible to store events from all Windows workstations on a single syslog server. The product will automatically notify the administrator about selected events by email, or send comprehensive reports on events happening on all or certain network workstations.

The Windows event log is essentially a background process that lacks any user interaction by its very design. EventLog Inspector makes Windows event log interactive by allowing local users to be notified about pre-selected system events with pop-up windows.

EventLog Inspector supports all NT-based versions of Windows from Windows 2000 to Vista and the latest 2008 Server. Supporting both IPv4 and IPv6 to communicate with syslog servers and over the SMTP protocol, EventLog Inspector is a future-proof investment.

### **About SnmpSoft Company**

Founded in 2006, SnmpSoft Company is a trusted provider of solutions for network administrators. Products manufactured by SnmpSoft Company are designed for the Windows platform, improving productivity and performance of network administrators and providing great value for the money.

A fully featured 30-day trial version of EventLog Inspector is available for free download at: <http://www.snmpsoft.com/eventloginspector/>
