For Immediate Release

Windows-Based Syslog Server

SnmpSoft Company announces the release of Syslog Watcher Pro Edition, a Windows-based syslog server for corporate networks. Syslog Watcher Pro Edition collects, stores, parses, displays and explains syslog information to both new and professional network administrators, helping to improve the stability and reliability of the network.

About Syslog Watcher Pro Edition

Syslog Watcher Pro Edition installs a dedicated syslog server, integrating log data from multiple network appliances into a single, easily manageable and accessible place. Collecting and analyzing syslogs is essential for maintaining network stability and auditing network security.

Syslog Watcher Pro Edition notifies system administrators about new system messages with an audible alert or a pop-up window, allowing you to fix network problems sooner and improving network reliability. The syslog server parses both standard-compliant and non-standard messages, easily processing corrupted and non-standard system logs without error. Syslog Watcher Pro Edition is designed to work under heavy load, and is able to process millions of syslog records without a problem.

~ MORE ~

Syslog Watcher Pro Edition supports VendorPack add-on. VendorPack is a complete syslog reference that explains the meaning of more than 14,000 syslog messages to new and professional system administrators, allowing them to make a more informed decision about the network situation.

About Syslog Protocol

Syslog protocol is a network logging standard supported by a wide range of network devices. Supported by a variety of network appliances, syslog protocol contains information on network events and errors. Syslog is invaluable for maintaining the network. It is used by system administrators for network management and security auditing. Syslog is supported by a variety of stand-alone and PC-based network devices and appliances. With a dedicated syslog server, the syslog protocol allows consolidating logs from all over the network into a single central repository.

About SnmpSoft Company

SnmpSoft Company specializes in manufacturing network software tools. SnmpSoft network software works on the Microsoft Windows platform and supports multiple industry standards. SnmpSoft concentrates its efforts on improving network performance and making the work of network administrators easier.

SnmpSoft products are designed for network and system administrators and other network specialists. The company's products are cost-efficient, reliable and easy to use. Make your network faster and more reliable with SnmpSoft network tools!
